1.0 INTRODUCTION

Research Title

“A Survey on DWCL Tertiary Student Satisfaction with Current School Online Communication Methods”

Background and Rationale

Effective online communication between schools and students is essential for academic success and engagement. Schools often use multiple platforms such as social media, messaging apps, email, and portals to disseminate information. However, despite these efforts, students still report missed announcements, unclear instructions, and fragmented communication. This study aims to evaluate student satisfaction with current school communication methods, identify gaps, and propose improvements.

Related Studies

Junco (2012) examined the relationship between social media use and student engagement in educational settings. The study found that platforms such as Facebook can support communication, collaboration, and interaction among students.

The study also noted that excessive exposure to social media content may contribute to information overload and distraction. Because of this, students may experience difficulty managing and filtering important academic information.

Deng and Tavares (2013) discussed the use of online portals and digital learning environments in education. Their study explained that online platforms improve accessibility by allowing students to easily access announcements, resources, and academic information.

The researchers further emphasized that the effectiveness of online portals depends on proper management and regular updates. Without consistent maintenance, students may encounter outdated or incomplete information.

Al-Maroofo and Salloum (2019) studied the acceptance and use of mobile technologies in educational environments. The study found that mobile applications provide convenience by allowing users to access information and communication tools more quickly.

However, the researchers explained that the usefulness of mobile applications is strongly affected by internet availability and connection quality. Limited internet access can reduce the effectiveness of these communication methods.

Kahu (2013) explored factors that influence student engagement and satisfaction in higher education. The study highlighted that effective and clear communication plays an important role in supporting student involvement in academic activities.

The research also explained that unclear communication may negatively affect students' academic experiences and participation. Students are more likely to remain engaged when information is understandable and accessible.

Manca and Ranieri (2016) analyzed the use of social networking platforms in educational contexts. The study observed that students are more comfortable using informal communication platforms because they are familiar and easily accessible.

The researchers also noted that educational institutions often continue using formal communication systems for official announcements. This difference between student preference and institutional practice may affect communication effectiveness.

Statement of the Problem

The study addresses the satisfaction surrounding how effective current school communication methods are in meeting DWCL Tertiary students' needs. Some students may face issues such as unclear messages, delays, or limited access to information, which can affect their engagement and satisfaction. Therefore, the study aims to assess student satisfaction with these communication methods to identify gaps and improve school communication.

1. What are the common online communication methods used by the school?
2. What is the level of student satisfaction with these online communication methods?
3. How often do students miss important announcements?
4. What challenges do students experience with school communication?
5. What communication platforms do students prefer?

Objectives

- General Objective: To assess DWCL tertiary student satisfaction with current school online communication methods.
- Specific Objectives:
 1. To Identify common online communication methods used by the school
 2. To Measure the level of DWCL tertiary student satisfaction with these methods
 3. To Determine how often DWCL tertiary students miss important announcements
 4. To Identify challenges students experience with school online communication
 5. To Determine students' preferred online communication platforms

2.0 METHODOLOGY

2.1. Research design

This study employs a descriptive survey design, appropriate for gathering quantitative data on student perceptions and satisfaction. It allows for identifying trends and common issues in communication methods.

2.2 Participants

Participants are undergraduate DWCL students across year levels (1st–4th year). They were chosen because they are the primary recipients of school communication. A stratified random sampling method ensures representation across year levels.

2.3. Research instrument

The study utilizes a **structured questionnaire** administered through **Google Forms**. The questionnaire consists of multiple-choice and Likert-scale items designed to measure:

- Common communication platforms used by the school
- Level of student satisfaction
- Frequency of missed announcements
- Challenges encountered
- Preferred communication methods

2.4 Analysis

The collected data will be analyzed using **descriptive statistical methods**, including:

- **Frequency**
- **Percentage**
- **Mean**

These tools will be used to summarize responses and determine overall student satisfaction and communication effectiveness.

2.5 Data collection procedure

Data will be collected by distributing the **Google Forms survey link** to selected participants through online platforms such as Messenger and email. Respondents will be given sufficient time

to answer the questionnaire. After collection, responses will be organized, tabulated, and prepared for statistical analysis.

3.0 RESULTS

This section presents the findings of the study titled “**A Survey on DWCL Tertiary Student Satisfaction on Current School Online Communication Methods.**” The data gathered from 103 respondents were analyzed and summarized using tables and descriptive explanations.

Table 1. Communication Methods Currently Used by the School

Communication Method	Frequency	Percentage
Messenger/GC	85	82.5%
Facebook Group/Page	82	79.6%
School Portal	63	61.2%
Email	59	57.3%
Face-to-face Announcements	51	49.5%

Table 1 shows the communication methods commonly used by the school. Messenger/GC and Facebook Group/Page were the most frequently used platforms among respondents. This

indicates that social media and instant messaging applications are the primary means of communication for DWCL tertiary students.

Table 2. Student Responses on School Online Communication Methods

Statement	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
I receive school announcements on time	8	34	44	7	9
The communication methods are reliable	8	41	41	6	6
Information provided is clear and understandable	13	45	35	4	5
I am satisfied with the current communication system	8	40	42	6	6

Table 2 presents the respondents' level of satisfaction regarding the current school communication methods. Most students selected either "Agree" or "Neutral" in all statements. The statement regarding the clarity and understandability of information received the highest number of positive responses. However, a significant number of students remained neutral,

suggesting that improvements in consistency and effectiveness of communication may still be needed.

Table 3. Frequency of Missing Important Announcements

Response	Frequency
Sometimes	57
Rarely	24
Often	13
Never	8

Table 3 shows how often students miss important school announcements. Most respondents answered “Sometimes,” indicating that although communication platforms are available, some announcements still fail to reach students effectively.

Table 4. Common Problems Encountered by Students

Experience Encountered	Frequency
Late announcements	71

No internet access	47
Unclear information	40
Too many platforms	40

Table 4 presents the common communication-related problems experienced by students. Late announcements ranked highest among the responses, followed by internet connectivity issues. These findings suggest that timeliness and accessibility remain major concerns in the school's current communication system.

Table 5. Preferred Platform for School Communication

Preferred Platform	Frequency	Percentage
Messenger	48	46.6%
Facebook	38	36.9%
Email	9	8.7%
School Portal	4	3.9%
Mobile App	2	1.9%

All of the Above 1 1.0%

Table 5 shows the respondents' preferred platform for school communication. Messenger emerged as the most preferred platform, followed by Facebook. This indicates that students favor fast and accessible communication platforms that are already part of their daily online activities.

Overall, the results reveal that DWCL tertiary students generally find the current online communication methods functional and understandable. However, concerns regarding delayed announcements, multiple communication platforms, and internet accessibility continue to affect student satisfaction. The findings suggest the need for a more centralized, timely, and efficient communication system for students.

4.0 CONCLUSION

Based on the findings of the study, DWCL tertiary students are generally satisfied with the school's current online communication methods. Most respondents agreed that the information they receive is clear, understandable, and usually delivered on time through platforms such as Messenger, Facebook, email, and the school portal.

Despite the positive responses, the study also revealed several issues affecting student satisfaction. Many students reported experiencing delayed announcements, unclear information, internet connectivity problems, and confusion caused by the use of multiple communication platforms. These challenges sometimes result in students missing important announcements and updates.

The results suggest that improving the school's communication system by using a more centralized and consistent platform may help increase efficiency and student satisfaction.

Providing timely announcements and ensuring that information is accessible to all students can further strengthen communication between the school and the student body.

Overall, the study concludes that while the current online communication methods are effective to some extent, there is still room for improvement to better meet the communication needs of DWCL tertiary students.

REV. FR. NIELO M. CANTILADO, SVD
President

Through: 
DR. SALVACION L. GARCERA, LPT
Vice President for Academic Affairs

Dear Fr. Cantilado:

As part of the final requirements in Quantitative Methods (IT PC 221), second-year students of the Bachelor of Science in Information Technology are required to conduct a short descriptive survey study on selected topics. This academic activity is designed to enhance their learning by allowing them to apply key concepts discussed in class, particularly in the areas of information technology research and descriptive statistics.

For practical and logistical purposes, the students intend to gather data primarily from Divinian tertiary students.

In this regard, I respectfully request permission from your office to allow the second year BSIT students to conduct their data collection among currently enrolled Divinian students within the school premises. The proposed survey studies are straightforward in nature, pose no known risks, and participation will be entirely voluntary.

I am hopeful for your support in facilitating this valuable learning experience for the students. Thank you very much for your time and consideration.

Regards,

DHAN DAVISH V. ALAMO
CSIT Instructor, IT PC 221

CONSENT FORM

Members: Arrio, Ronnleigh A., Fegason, Jericho M., Ludovice, Justine L., Velasco Charles Kenneth B.

We are conducting a study entitled “**A Survey on DWCL Tertiary Student Satisfaction with Current School Online Communication Methods.**” This study examines how effectively the school communicates with students through various online platforms, including social media, messaging applications, email, and official portals. While these tools are intended to support timely information dissemination and student engagement, challenges such as missed announcements, unclear instructions, and fragmented communication persist.

Part 0: Privacy and Consent (Required)

Before answering, please read the statement below:

"This survey is conducted for academic research purposes only. Your responses will remain confidential and will be used solely for analysis. No personal information will be shared outside the research team. Participation in this survey is entirely voluntary. You may choose not to participate or withdraw at any time without any consequences."

“This survey is conducted in compliance with the Data Privacy Act of 2012 (Republic Act No. 10173), which ensures the protection of your personal information. Any data collected will be used solely for research purposes and will be handled with strict confidentiality. Participation in this survey is voluntary, and you may choose to skip any question or withdraw at any time without penalty. All responses will be anonymized and stored securely, accessible only to authorized individuals. By proceeding with this survey, you acknowledge that you have read and understood this statement and consent to the collection and processing of your data in accordance with applicable data privacy laws.”

Consent Statement

By proceeding with this survey, you confirm that:

- You have read and understood the information provided above.
- You are voluntarily agreeing to participate (You may refuse to answer any question or withdraw from the survey at any time without any penalty)

Do you agree to participate in this survey under the conditions stated above?

- ☐ **Yes, I agree to participate in this research survey.**
- ☐ **No, I do not agree to participate.**
